SERBUASMAT

01 / ABOUT US

YOUR OPERATION, OUR COMMITMENT. SPECIALISTS IN UNDERWATER SERVICES.

We are Servicio de Buceo Asmat S.A.C. - Serbuasmat.

RUC 20604497770

We provide underwater services for vessels and marine facilities. We support asset managers from condition assessment through to maintenance or damage response.

VESSELS + MARINE INFRASTRUCTURE

A CLEAR APPROACH TO EVERY JOB

01 WE COORDINATE

We define the requirements, scope and intervention conditions with the asset manager.

02 WE INSPECT

We examine submerged components and identify findings through visual inspection.

03 WE CARRY OUT THE WORK

We perform the agreed work according to site conditions and the applicable permits.

04 WE DOCUMENT

We communicate results through the report and visual records agreed for the service.

MAINTENANCE THAT STARTS BELOW THE WATERLINE.

01 HULL CLEANING

Removal of organic and calcareous fouling from the hull, keel and underwater surfaces. Grating cleaning and, where agreed, sea chest opening and internal cleaning.

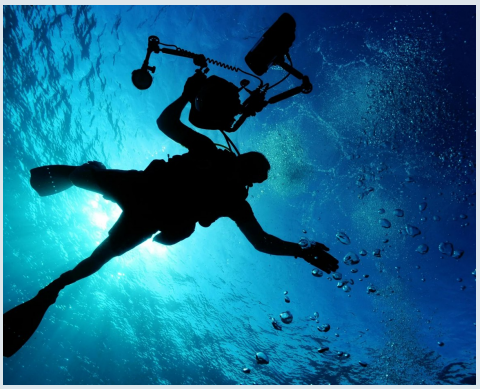

HULL / KEEL / GRATINGS / SEA CHESTS

02 PROPELLERS AND PROPULSION

Cleaning of propellers, nozzles and rudders. Removal of entangled nets and ropes. Hydraulic propeller polishing, subject to scope assessment.

PROPELLERS / NOZZLES / RUDDERS

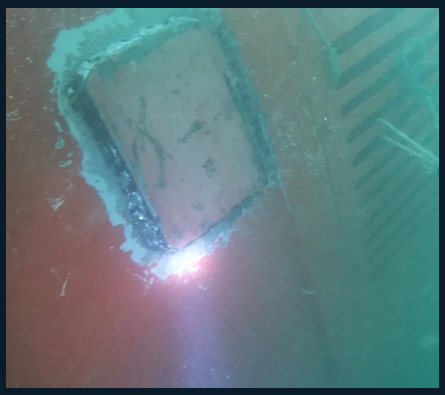

03 INSPECTION AND VIDEO SURVEYS

Visual inspection of underwater hull surfaces, welds, submerged equipment and sacrificial anodes. Photographs and video document the condition found and the intervention.

VISUAL RECORDS / FINDINGS / REPORT

PRECISION IN EVERY INTERVENTION.

04 WELDING AND REPAIRS

Hull and structural damage repairs: patch installation, underwater welding and sealing with materials suitable for underwater application.

The solution and its limitations depend on the damage, location and sea conditions.

05 PIERS AND STRUCTURES

Inspection of piles, bracing, supports and submerged components. Deterioration records and a supporting technical report for biennial inspection procedures.

Certificate issuance and approval of the procedure are the responsibility of the competent authority.

06 SUBMARINE OUTFALLS

Inspection and route surveys. Assessment of visible sections, ballast, fastenings and discharge components, with documented findings and recommendations.

The inspection scope depends on visibility and seabed conditions.
